

design for living

We bring a new approach to domestic 'design and build'.

We specialise in the conversion, remodeling and rebuilding of dilapidated buildings, including barn conversions.

From drainage, concrete and steel to floor finishes, bath taps and doorknobs, we will design, specify, engineer and build your house from the ground up.

We have the know-how to advise on modern technology, from the latest high temperature energy efficient heat pumps, to lighting, heating and security systems you can control from your iphone.

We work with you, adopting open- book accounting to manage your budget. We take responsibility for the day-to-day build management and technical specifications.

We apply design vision and construction knowledge to turn your dreams into reality.
